PROFILE SUMMARY

- I am a dedicated SDE with over 2 years of experience specializing in ML and data science. My expertise lies in developing and deploying production ML systems and building scalable APIs. I have a proven track record in optimizing data workflows and enhancing operational efficiency across multiple projects, making impactful contributions to my teams

EXPERIENCE

Software Development Engineer

Onemind Services LLC

Gurgaon, India

Aug 2023 – Nov 2025

- Engineered **machine learning-driven log analytics** using **Elasticsearch**, orchestrating automated anomaly detection and **improving service uptime by 55%** across distributed environments.
- Streamlined **AI-automated workflows** across GitHub Actions and Kubernetes, automating task assignments with **OpenAI**, and **maximizing operational efficiency by 40%** for engineering teams.
- Conceptualized and delivered **Elastic ML-powered analytical dashboards**, enhancing observability and **reducing manual service review time by 75%** for approximately 177+ services.
- Simplified **task creation, tracking, and workflow automation** across 14 cross-functional projects by integrating ML/AI with Jira, **reducing effort and review time by 95%** for development, deployment, and support teams.
- Optimized cross-platform automation by enhancing **DiffSync-based DigitalOcean droplet synchronization**, unifying multiple systems under a single analytical data flow and improving infrastructure consistency.
- Automated enterprise-scale **central device provisioning** using radio caching and batched API workflows, **increasing sync throughput**, eliminating redundant operations, and **reducing provisioning time by 40%**.

SKILLS

Programming: Python, C, C++, SQL, Core Java

Tools & Technologies: TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, NLTK, spaCy, Transformers, Git, Docker, Linux, PostgreSQL, Elasticsearch, GitHub Actions, Azure, DigitalOcean

EDUCATION

Bharat Institute of Technology, Meerut

Bachelor of Computer Applications | Focus in *Computer Science, Applied Statistics*

July 2019 – Aug 2022

PROJECTS

CNN Model for Gloved/Ungloved Hand Detection

- Developed a **CNN-based image classifier**, achieving **91% accuracy** through extensive data augmentation.
- Optimized the training pipeline using **Batch Normalization**, **Dropout**, and **learning-rate scheduling**, significantly **reducing validation loss** and improving training stability.
- Enhanced model generalization by applying **feature engineering** and analyzing feature maps to **minimize overfitting** across diverse hand-image variations.

Reddit Comment Violation Classifier

- Fine-tuned a **Gemma-3 transformer model** to classify spam, harassment, hate-speech, and abusive comments with **84% accuracy**, significantly improving automated policy-violation detection across large Reddit datasets.
- Built scalable **preprocessing and batched inference pipelines** enabling efficient, high-throughput processing of millions of comments, reducing latency and ensuring consistent performance under heavy production workloads.
- Automated **rule-violation detection workflows**, reducing manual moderator workload by **60%**, increasing review throughput, and enabling faster, more reliable content moderation at scale.

GitHub Code Assistant

- Built an AI code assistant analyzing full repository structures, reducing developer onboarding by **40%**.
- Developed a multi-repo parsing engine accelerating unfamiliar codebase exploration by **70%**.
- Integrated custom LLM pipelines improving personalized code explanation accuracy by up to **55%**.

CERTIFICATIONS

- Supervised Machine Learning, Advanced Learning Algorithms — **Stanford University**
- Unsupervised Learning, Recommenders, and Reinforcement Learning — **Stanford University**
